City Councilors

FROM: Andrew H. Deci, Director of Planning & Development *ahd*

DATE: March 17, 2016

RE: March 23, 2016 Workshop on the Riverwalk and Guilford
Lot Improvements

City staff have been working with Wright-Pierce Engineers on conceptual designs and cost estimates for the development of the riverwalk and improvements at the Guilford Lot. The riverwalk is a long-term goal of the City's, focusing on providing access to the Kennebec River, connections between the Visitor's Information Center and the Downtown, and opening business opportunities along the waterfront.

Wednesday's workshop will introduce the project to you; we will have several plans and cross-sections of the work that has been accomplished and cost estimates for those improvements. Staff would like to understand the Council's interest in various elements of the project and the willingness to fund the project.

The plans have been formulated with the input of current property owners along the pathway, but are based in planning exercises completed on this topic in the last ten years.
